

HTML List

## unorderd list

- Order doesn't matter
- Just mention the thing

Bullet list

```
<ul>
  <li> Banana </li>
  <li> Orange </li>
  <li> grapes </li>
</ul>
```

To change into something  
else attribute are used

```
<ul style="list-style-type: square">
```

Disc, circle, square, none are used

## Ordered list

- following things in order
- Ordered list hold a semantic meaning

Numbered list

```
<ol>
  <li> Take water </li>
  <li> Add sugar </li>
  <li> Chai + milk </li>
  <li> Boil + Chai ready </li>
</ol>
```

To change into something  
else

```
<ol type="a, A, 1, I, i">
```

We can use this

```
<ol start="10">
```

Start from 10

→ HTML List Example Project was created

→ JMS → Create 5 list

→ Nested list

1 array

→ 1D array

→ 2D array

2 linked list

3 Tree

## Anchor tag

- ⇒ used to create hyperlinks
- ⇒ `<a href = "https://youtube.com"> youtube </a>`
- ⇒ To open in new page ⇒ `target = "blank"`
- ⇒ my top 5 website project was created

## Image tag

⇒ Self closing tag

⇒ `<img src = "..." height = "100" width = "200" alt = "...">`

image  
tag

source  
link

Height &  
width of  
image

if image is no  
opened in text
